

2015 CHaMP Camp Workshop

Data Availability and Tools

June 2, 2015

9:15 a.m. – 10:30 a.m.

Lead Trainer: Carol Volk

Objectives:

Familiarize participants with CHaMP data availability and access tools.

Software needs:

Additional Resources: Contact Carol Volk (carol@southforkresearch.org) for additional information on data accessibility and availability.

Abstract:

Data and tools produced by CHaMP are available through multiple websites, and are subject to change as updates are made to the program. Most monitoring data and metadata are available through the [CHaMP Monitoring Website](#). The primary function of this website is to support CHaMP Crew data collection, quality assurance, and data review. It also serves as a central portal for protocol, reports, presentations, and training material. New users may request a login via the website. User permissions may restrict the availability of some information (e.g., data that have not yet undergone all levels of QA/QC). Although many data products are currently affiliated with the CHaMPMonitoring.org site, much of the developmental work behind these tools has been facilitated by ISEMP. Today's session will explore the materials available on CHaMPMonitoring.org and other websites, and walk participants through data access and retrieval processes.
